

Statement on principal adverse impacts of investment decisions on sustainability factors.

Financial market participant Deka International S.A., LEI: 529900LOL386ST9OX981

As at 30 June 2025

Summary

Deka International S.A. (LEI: 529900LOL386ST9OX981) considers principal adverse impacts of its investment decisions on sustainability factors. The present statement is the consolidated statement on principal adverse impacts on sustainability factors of Deka International S.A..

This statement on principal adverse impacts on sustainability factors covers the reference period from 1 January 2024 to 31 December 2024.

The statement refers to the consideration of the principal adverse impacts on sustainability factors in the firm's investment decision-making processes for its investment funds. Deka International S.A. has outsourced the execution of the portfolio management of its funds to Deka Investment GmbH and Deka Vermögensmanagement GmbH. Therefore, the measures to consider the principal adverse impacts on sustainability factors are implemented in the investment decision processes of Deka Investment GmbH and Deka Vermögensmanagement GmbH.

Principal adverse impacts of investment decisions on sustainability factors (hereinafter also referred to as "PAI") are the negative impacts associated with investments in companies, sovereigns and supranational organizations, and real estate assets on the environment and society.

The consideration of PAIs includes the identification, measurement and prioritization of PAIs, as well as measures to mitigate and reduce PAIs in the investment processes. For this purpose, Deka International S.A. considers all 18 mandatory PAI indicators defined by the Delegated Regulation to the Sustainable Finance Disclosure Regulation ((EU) 2022/1288) – 14 for investments in companies, 2 for investments in sovereigns and supranational organizations, 2 for investments in real estate. In addition, two additional PAI indicators are taken into account, of which one is an environmental PAI indicator and one is a social PAI indicator. The selection of the additional indicators is based on data availability and quality, irreversibility and severity or scope of the PAI, relevance for the main asset classes of the firm and its general sustainability strategy.

The principal adverse impacts of investment decisions are measured based on the before mentioned PAI indicators for all companies, sovereigns and quasi-sovereign issuers, target funds and real estate assets in the investment universe; provided that investments have been made in the respective categories and data is available having used best efforts to obtain the relevant data. For this purpose, a leading ESG data provider with access to a wide range of data points and resources is used. In addition, PAI data is occasionally requested directly from companies (particularly in the case of irregularities). Furthermore, companies are encouraged to publish PAI-related information as part of the firm's engagement activities. The PAI data used includes both data reported by companies and data estimated by the data provider.

Measures to manage the PAIs associated with the investments include company-wide exclusion criteria that apply to all of the company's investment decisions (e.g. exclusion of manufacturers of controversial weapons for investments in individual securities). Furthermore, a PAI steering mechanism is applied, which defines thresholds for a selection of PAI indicators, leading to the exclusion of companies, sovereigns or target funds that exceed the defined threshold, depending on the PAI indicator and product category (products with sustainability characteristics or products without sustainability characteristics). Further measures include the application of an internal risk level assessment model, which leads to the exclusion of companies involved in very serious ESG controversies, and sustainability-related exclusion criteria for products with

sustainability characteristics. The measures intend to avoid investments in financial instruments from issuers with particularly high principal adverse impacts or to remove them from the investment universe in the event of an increase in adverse impacts. Engagement activities - the targeted dialogue and the exercise of voting rights at general meetings of the companies in which the firm invests - are also part of the measures to reduce the PAI of investment decisions. As an investor, the firm also consciously remains invested in companies with critical business activities and tries to use its influence as an active shareholder to encourage these companies to operate in a more sustainable and responsible manner. Companies that are identified as having shortcomings in their impact on the environment and society are addressed, their progress is monitored and they are supported in the long term in order to achieve an improvement. If no improvement is observed in the long term, the company concerned can be excluded from the investment universe in a final escalation stage. In this context, Deka International S.A. has outsourced the active exercise of shareholder rights as part of its engagement policy to Deka Investment GmbH, which carries out the engagement activities.

Deka International S.A. supports and complies with a large number of international standards for responsible corporate governance, due diligence and reporting. These include the principles of the UN Global Compact. Deka International S.A. is also a signatory to the UN Principles for Responsible Investment (UN PRI). Deka Investment GmbH and Deka Vermögensmanagement GmbH, which are responsible for executing the portfolio management for the funds of Deka Investment S.A., have also signed the UN PRI. In addition, both Deka Investment GmbH and Deka Vermögensmanagement GmbH are members of the Net Zero Asset Managers Initiative.

The principles of responsible corporate governance are firmly anchored in the Deka Group. The Deka Group's Code of Ethics serves as a code of responsible corporate governance for all employees, managers, members of the Board of Management and for all those acting on behalf of the Deka Group. The code of ethics creates a binding orientation framework for sustainable action within the Deka Group by defining guidelines and principles relating to integrity, professionalism, responsibility, trust, collegiality, compliance, sustainability, respect and consequences in dealing with violations.
